

HIV AND SRHR LINKAGES INFOGRAPHIC SNAPSHOT UGANDA 2016

What's this
all about?

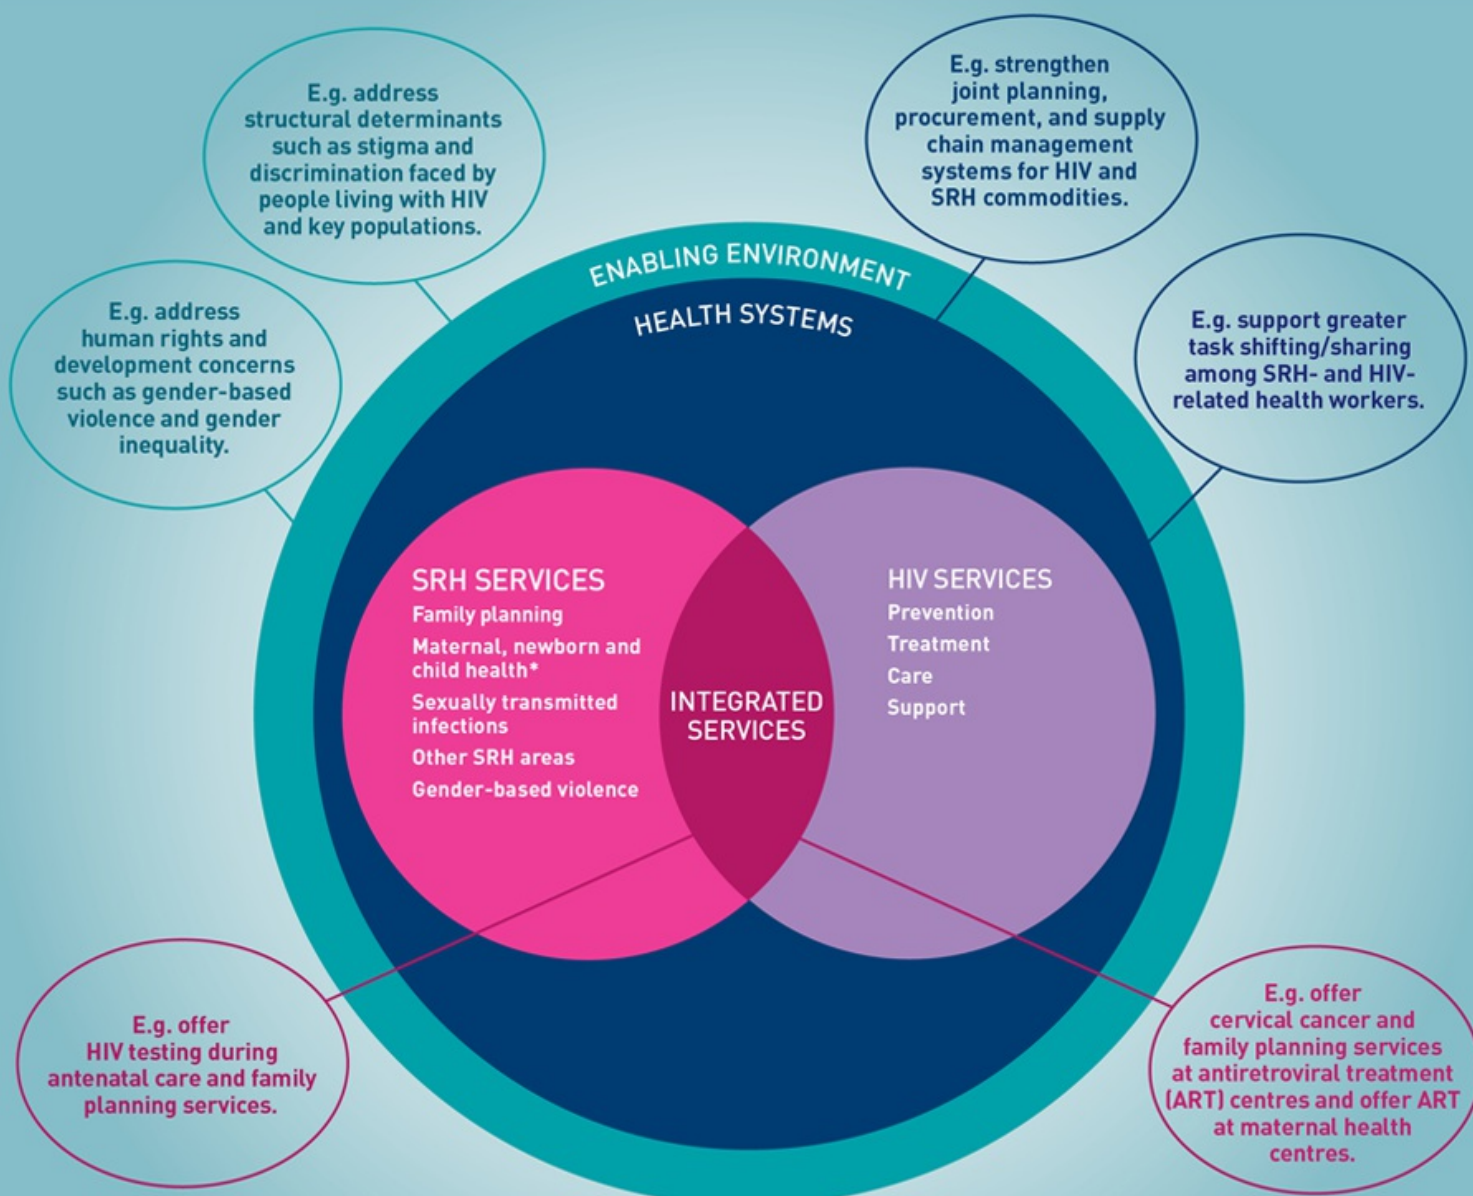

This country snapshot provides an overview of national level data for the full scope of HIV and sexual & reproductive health and rights (SRHR) linkages/integration at three levels:¹

- enabling environment (policy and legal)
- health systems
- integrated service delivery

By highlighting results, areas that need strengthening, and data gaps, this snapshot can be used for determining priorities, programme planning, and resource mobilization.

▲ also p.10

Source: Adapted from WHO, UNFPA, UNAIDS, IPPF (2005) Sexual and reproductive health and HIV/AIDS: A framework for priority linkages. http://srhhivlinkages.org/wp-content/uploads/2013/04/frameworkforprioritylinkages_2005_en.pdf

*Maternal health is an SRH service, which is often clustered with newborn and child health services.

Linkages versus integration²

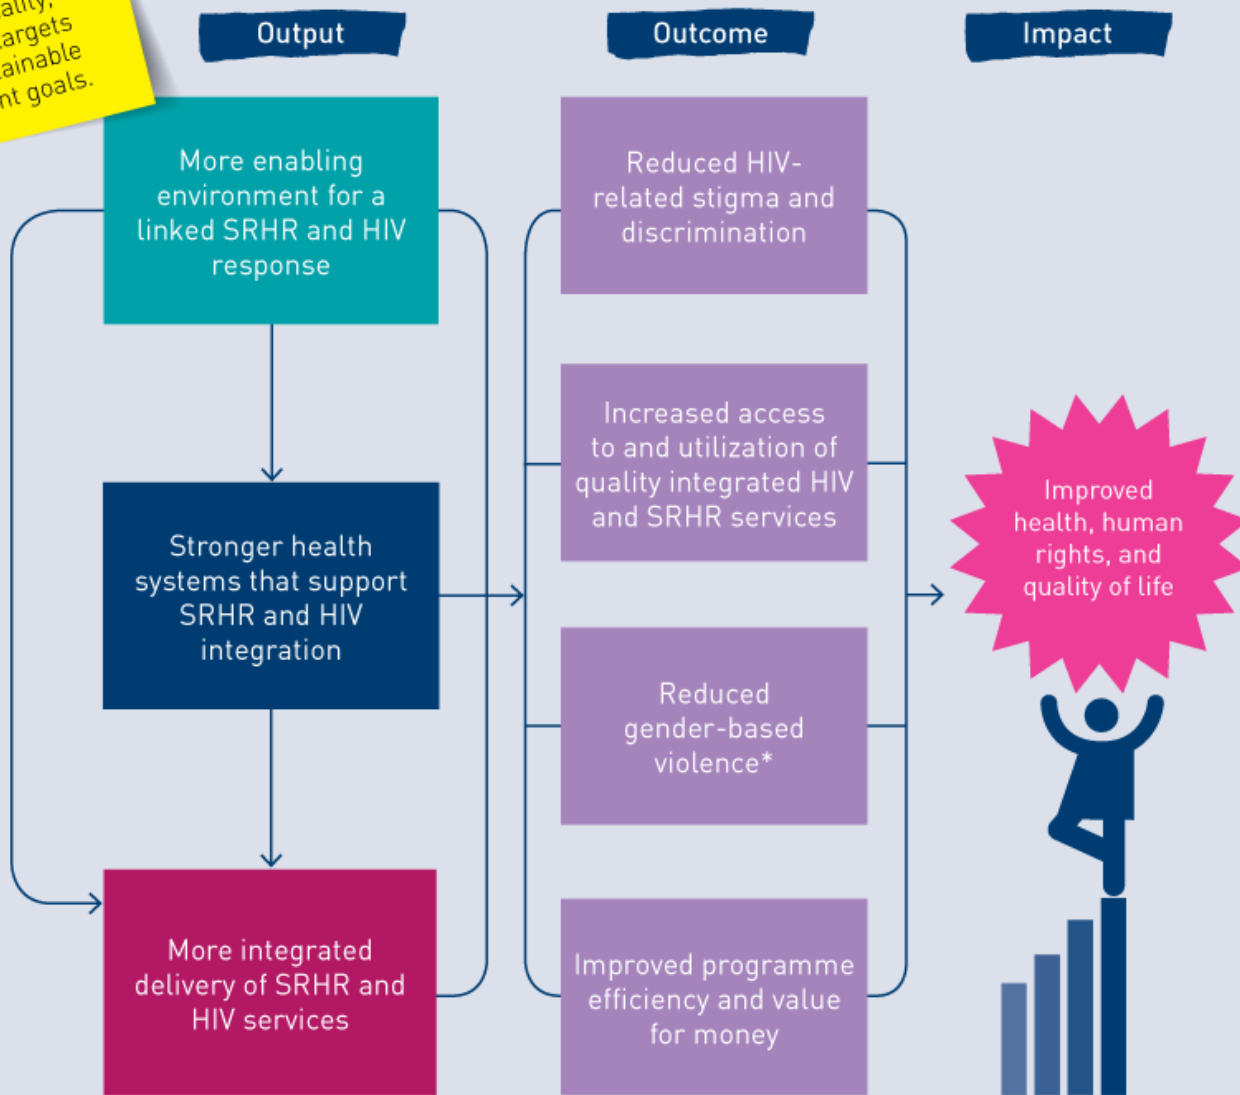

Linkages refer to bi-directional synergies in policy, systems, and services between SRH and HIV. It refers to a broader human rights-based approach, of which service integration is a subset.

Integration refers to the service delivery level and can be understood as joining operational programmes to ensure effective outcomes through many modalities (multi-tasked providers, referral, one-stop shop services under one roof, etc.).

Upholding human rights is intrinsic to the linkages agenda, in particular the human rights of people living with HIV, key populations, and women and girls.³

Linking HIV and SRHR responses is critical for reaching human rights, gender equality, and health targets for the sustainable development goals.

Theory of change for SRHR and HIV linkages

Source: Adapted from IPPF, UNFPA, WHO (2014) SRH and HIV Linkages Compendium: Indicators and Related Assessment Tools. Available at: <http://bit.ly/1KVaeT1>

* It is recognized that reducing stigma and discrimination and gender-based violence are also impact level measures and the outcome measures influence each other.

Key HIV and SRHR intersections: Uganda data^{3a}

The intrinsic connections between HIV and SRHR are well-established, especially as HIV is predominantly sexually transmitted or associated with pregnancy, childbirth and breastfeeding.⁴

Where data is not available this is marked with

or

Population size 37.8 million^{4a} Life expectancy at birth 59.2^{4b} Fertility rate 5.9^{4c}

HIV is a leading cause of death in women of reproductive age (globally)⁵

Condom use at last sex²⁴

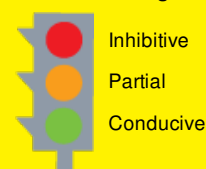

15%

Enabling environment (policy and legal)

SRHR and HIV strategies and policies should be interconnected to increase service provision and uptake. Effective responses also must go beyond health services to address human rights and development.

Support to SRHR and HIV linkages:

Strategies and policies

Is there a national HIV strategy?²⁵

If yes, have the following SRHR components been included as a measurable target:^{25a}

Condoms (with reference to STI prevention / contraceptive method)?	No
Prevention / elimination of mother-to-child transmission of HIV?	Yes
SRHR of people living with HIV?	Yes
Sexually transmitted infections?	Yes
Gender based violence?	Yes

Is there a national SRHR strategy?²⁶

If yes, have the following HIV components been included as a measurable target:^{26a}

Condoms (with reference to HIV prevention)?	Mentioned
Prevention / elimination of mother to child transmission of HIV?	Mentioned
SRHR of people living with HIV?	Mentioned
Sexually transmitted infections?	Mentioned
HIV counselling and testing?	Mentioned

Is there a national SRHR and HIV integration policy or strategy?²⁷

Laws

▲ also p.5

▲ also p.9

▲ also p.7

People living with HIV

Are there laws that:^{27a}

criminalise HIV transmission or exposure? ²⁸	Yes	28a
impose HIV specific restrictions on entry, stay or residence? ²⁹	No	29a
address HIV-related discrimination and protect people living with HIV? ³⁰	Yes	30a

Key populations

Are there laws that:^{30b}

criminalise same-sex sexual activities? ³¹	Yes	31a
deem sex work as illegal? ³²	Yes	32a
mandate the death penalty for drug offences? ³³	No	33a
demand compulsory detention for people who use drugs? ³⁴	No	34a
recognise a third, neutral and non-specific gender besides male and female? ³⁵	No	35a

Gender-based violence

Are there laws that:

address gender-based violence? ³⁶	Yes	36a
penalise rape in marriage? ³⁷	No	37a
allow free entry into marriage and divorce? ³⁸	No	38a
allow the removal of violent spouses? ³⁹	No	39a

Other laws

▲ also p.8

Are there laws that:

make sexuality education mandatory? ⁴⁰		DATA NOT AVAILABLE
allow legal abortion? ⁴¹	Yes: to save a woman's life; to preserve a woman's physical health; to preserve a woman's mental health; in case of rape or incest; because of foetal impairment	
prohibit female genital mutilation? ⁴²	Yes (limited enforcement)	

Age of Consent

▲ also p.5 & 8

What is the minimum legal age for marriage without parental consent?⁴³

18 years
18 years

What is the legal age for HIV testing without parental consent?⁴⁴

12 years

What is the legal age for accessing contraceptives?⁴⁵

What is the legal age for consent to sexual intercourse?⁴⁶

18 years
18 years

Stigma faced by people living with HIV

People living with HIV often face stigma and discrimination. A non-supportive environment can drive people living with HIV away from SRHR and HIV prevention, treatment, care and support services, hindering the AIDS response.

Percentage of general population reporting discriminatory attitudes to HIV⁴⁷ **26.2%**

Has the Stigma Index been conducted?⁴⁸

2013⁴⁹

A sample of 1110 PLHIV (555 female and 555 male).

Key findings from the Stigma Index

Denied sexual and reproductive health (SRH) services	87.2%
Denied family planning services	86.7%
Experienced forced or coerced sterilization by healthcare provider on the basis of HIV	Female 12%; Male 8%
Ever counselled about reproductive options since being diagnosed HIV-positive	Female 72% Male 63%
Could access ART (among people yet to commence)	95%
Had a constructive discussion on HIV treatment options	73.7%

Reported experience of stigma and discrimination that hinder access to HIV and SRH services **4.8% (n=53)**
Sought redress if rights violated **25%**

Women's empowerment

Achieving gender equality and empowering women (Sustainable Development Goal 5) is essential in its own right and also affects health status. It is a broad agenda that includes: ending stigma and discrimination, violence, and harmful practices; ensuring autonomy in health decisions; and accessing SRHR and equal rights to economic resources.⁵⁰

Ability to participate in decisions regarding their own health^{50a}

Women who believe wife is justified in refusing sex with husband^{50b}

74%

Gender-based violence

Intimate partner violence has been shown to increase the risk of HIV infection by around 50%. Violence, and the fear of violence, may deter women and girls from seeking HIV testing, disclosing HIV-positive status, and seeking other services for their HIV and SRHR needs.⁵¹ Visit <http://bit.ly/1PIpTip>

Prevalence of recent intimate partner violence⁵²

33.3%

Gender-based violence is a cause and consequence of HIV

Girls married before 18⁵³

Women who agree husband is justified in hitting or beating his wife:

for at least one specified reason^{53a}

58%

if she refuses sex with him^{53b}

22%

Intimate partner violence prevention programmes⁵⁴

In-school education on preventing dating violence

No

Microfinance and gender equity training

No

Changing social and cultural norms that support violence

Limited

Children and Social Protection

Orphanhood is frequently accompanied by prejudice and increased poverty, factors that can jeopardize children's chances of completing school education and may lead to increased vulnerability to HIV and poor SRHR outcomes. As such, economic support (with a focus on social assistance and livelihoods assistance) to poor and HIV-affected households remains a high priority in many comprehensive care and support programmes.⁵⁵

Children whose households received external support⁵⁶

AIDS deaths in adults occur just at the time in their lives when they are forming families and bringing up children.

Ratio of school attendance of orphans to non-orphans (aged 10–14 years)⁵⁷

Children who have lost one or both parents due to AIDS⁵⁸

650,000

Health systems

Integrating SRHR and HIV services requires addressing components of health systems.

These include coordination, joint partnerships, planning and budgeting, human

resources, procurement and supply chain management, and monitoring and evaluation.

Human resources

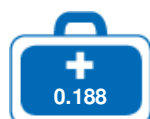

Doctors per
1,000⁵⁹

Nurses and
midwives per
1,000⁶⁰

Community and traditional
health workers per 1,000⁶¹

Training and supervision

Are there SRHR training materials and curricular that include HIV?⁶² Yes (partial)

Are there HIV training materials and curricula that include SRHR?⁶³ Yes (partial)

To what extent is supportive supervision for SRHR and HIV integrated at the health service-delivery level?⁶⁴ Partially integrated

Is there a tool for integrated supervision available?⁶⁵ No

Logistics and supplies

HIV and SRHR commodities

Are there integrated supply systems?⁶⁶ No

Are there integrated ordering systems?⁶⁷ No

Are there integrated monitoring systems?⁶⁸ No

Commodity stockouts

Contraceptives⁶⁹

86%

Antiretrovirals for HIV⁷⁰

47.9%

STI drugs⁷¹

Coordination, planning and budgeting

Is there joint planning of HIV and SRHR programmes?⁷² No

Is there any collaboration between SRHR and HIV for programme management/implementation?⁷³ Yes

Health information systems⁷⁴

Health system statistical capacity

National surveys

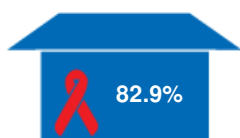

Facility-based data
collection

SRHR and HIV service coverage

HIV testing and counselling facilities per
100,000 adult population⁷⁵

Primary level service delivery points offering
at least three modern methods of
contraception⁷⁶

Rapid Assessment of SRH and HIV linkages⁷⁷

Has the Rapid Assessment for Sexual and Reproductive Health and HIV Linkages been conducted?⁷⁸

A rapid assessment of SRH and HIV linkages is a useful tool for countries to assess existing bi-directional linkages at the policy, systems and service-delivery levels.

Integrated service delivery

Providing integrated services enables clients to receive as many quality services as possible at the same time and in the same place, especially at the primary healthcare level. This can happen through government, civil society, and private providers.

Integrated service provision

Health facilities provide HIV services integrated with other health services

HIV counselling and testing with SRH⁷⁹

Many

EMTCT with antenatal care/maternal and child health⁸⁰

Many

Elimination of mother-to-child transmission of HIV (EMTCT)

Eliminating new HIV infections among children and keeping their mothers alive is based on a four-pronged strategy.⁸¹

Women living with HIV delivering⁸²

New child HIV infections⁸³

Pregnant women attending an antenatal care clinic

at least once⁸⁴

at least 4 times⁸⁵

whose sexual partners were tested for HIV in the last 12 months⁸⁶

Indicators for elimination of mother-to-child transmission of HIV

Prong 1: new HIV infections among women 15-49 ⁸⁷	49,000
Prong 2: unmet need for family planning for women of reproductive age ⁸⁸	34%
Prong 3: final mother-to-child HIV transmission rate ⁸⁹	7.7%
Prong 3: women receiving antiretrovirals (ARVs – excluding single dose nevirapine) to prevent new infections among children ⁹⁰	92.1%
Prong 3: women or infants receiving ARVs during breastfeeding ⁹¹	92%
Prong 4: ART coverage among children under 15 years ⁹²	37%

Demand for family planning satisfied with a modern method of contraception for women living with HIV (15-49)⁹⁵

Pregnant women who know their HIV status⁹³

Skilled attendant at birth⁹⁴

Dual elimination of mother-to-child transmission of HIV and syphilis

In 2007 WHO launched an initiative for the global elimination of congenital syphilis, outlined in the global elimination of congenital syphilis: rationale and strategy for action.⁹⁶ Initiatives are now ongoing for dual elimination of mother-to-child transmission of HIV and syphilis as an integrated process, including data validation.⁹⁷

Elimination of mother-to-child transmission of syphilis

Congenital syphilis rate (per 100,000 live births) ⁹⁸	DATA NOT AVAILABLE
Antenatal care attendees tested for syphilis at first antenatal care visit ⁹⁹	15%
Antenatal care attendees who test positive for syphilis ¹⁰⁰	2%
Antenatal care attendees positive for syphilis who are treated appropriately ¹⁰¹	DATA NOT AVAILABLE

<http://bit.ly/1jCx7sf>

Focus on adolescents and youth

Young people need access to a range of SRHR and HIV information and services on a broad range of topics related to their physical, social, emotional, and sexual development.

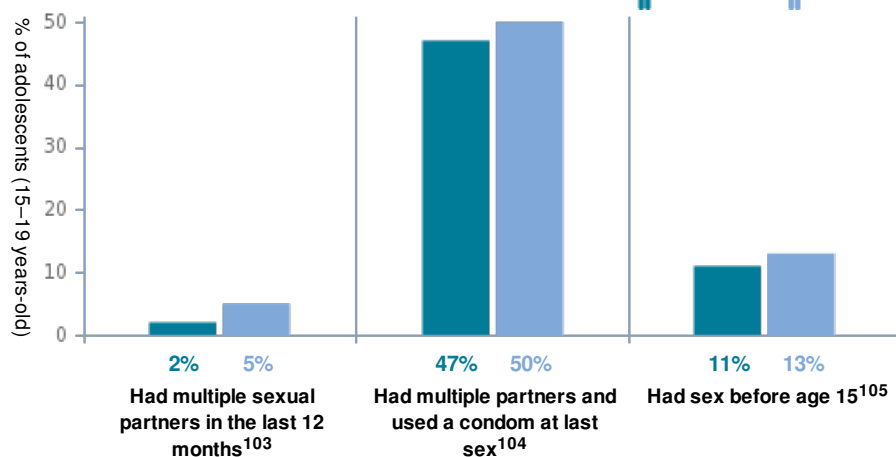

Young people, including those living with HIV and from key populations, need access to comprehensive services and a supportive legal framework.

Sexual behaviour

Median age at first sex among young people aged 20-24¹⁰²

Adolescents aged 15-19 who had:

Youth unemployment¹⁰⁹

Unmet need for family planning, among young women aged 15-19¹⁰⁶

Young women aged 15-19 who have ever had a child¹⁰⁷

Recent births to mothers under 20 that were unplanned¹⁰⁸

Young women aged 15-19 able to participate in decisions about their healthcare^{108a}

6.6%

HIV

Estimated number of adolescents living with HIV aged 10-19¹¹⁰

Young people living with HIV aged 15-24¹¹¹

Adolescents aged 15-19 who were ever tested for HIV and received the results¹¹²

11,000

New HIV infections among adolescents aged 15-19¹¹³

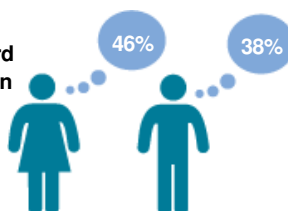

3,000

AIDS deaths among adolescents aged 10-19¹¹⁴

Knowledge and comprehensive sexuality education

▲ also p.4

Young people aged 15-19 who have heard of family planning on any of the three sources (radio, TV or newspapers)¹¹⁵

Adolescents aged 15-19 who have comprehensive knowledge of HIV¹¹⁶

Schools that provided skills-based HIV and sexuality education in the previous academic year¹¹⁷

Focus on key populations

Key populations, including men who have sex with men, people who use drugs, sex workers

and transgender people typically have higher HIV prevalence than the general population.

The criminalization of key populations drives people away from health services, increasing

vulnerability to negative SRHR and HIV outcomes, as well as to stigma, discrimination, and violence.

Key populations are often not reached with health services, including for SRHR and HIV, and frequently experience violation of their human rights.

▲ also p.4

Useful programme implementation tools* and guidelines

World Health Organization (2013) *Implementing comprehensive HIV/STI programmes with sex workers: practical approaches from collaborative interventions*.

<http://bit.ly/1ISZWVz>

World Health Organization (2014) *Consolidated guidelines on HIV prevention, diagnosis, treatment and care for key populations*.

<http://bit.ly/1rhtlgZ>

UNFPA et al. (2015) *Implementing comprehensive HIV and STI programmes with men who have sex with men*.

<http://bit.ly/1LWYfQ6>

*Similar implementation tools for HIV/STI programming with other key populations are currently under development.

Additional regional and national data

This infographic snapshot builds on an overarching framework defining HIV and SRHR linkages/integration and provides related national data. Specific aspects of HIV and SRHR linkages/integration vary by region and country due to different types of HIV epidemics and structural drivers of HIV and SRHR. Therefore, a differentiated approach to investment and programming is required.

The suggested way forward

1. **Disseminate the snapshot broadly** to key decision-makers in the government (e.g. Ministry of Health and National AIDS Commission), programme managers, donors, UN agencies, civil society organisations and community-based organisations, and use for advocacy at key events.
2. **Review the data** presented in the snapshot with key HIV and SRHR stakeholders to identify and discuss areas where further work is particularly needed.
3. **Convene a technical working group** with HIV and SRHR stakeholders to jointly plan, coordinate activities and monitor progress on HIV and SRHR linkages/integration.
4. **Work with the Ministries of Justice, Education and Health, and other appropriate sectors** to eliminate human rights violations, such as gender-based violence, early and forced marriage and stigma and discrimination.
5. **Use the snapshot** when developing and evaluating strategies, operational plans and funding proposals.
6. **Collaborate with relevant data collection entities** to fill gaps where data are not available.

133. Indicator: Percentage of transgender people reporting the use of a condom the last time they had sexual intercourse

Inter-Agency Working Group on SRH and HIV Linkages

The Inter-agency Working Group on Sexual and Reproductive Health (SRH) and HIV Linkages is convened by UNFPA, WHO, and IPPF and works with more than 20 organizations to:

- advocate for political commitment to a linked SRH and HIV agenda;
- support national action to strengthen SRH and HIV linkages at the policy, systems, and service delivery levels; and
- create a shared understanding of SRH and HIV linkages by building the evidence base and sharing research, good practice, and lessons learnt.

Key achievements since 2004
